Having worked for the last three years as Software Engineer in .net framework, I came across projects with windows application & asp.net web applications. On going further, I would like to explore more technologies and enhance my skills in web application development. I wish my career will inflate along with your organization, by working as a team.

SUMMARY

Three years of Experience in handling classic asp web applications, assisting my team and coordinating with them. Solving user issues and delivering the deliverables within stringent timelines. Eager to learn new technology and come up with ideas for application enhancement.

TECHNICAL SKILLS:

- Programming background in C#.
- Worked in ASP.Net web applications, Windows/Forms applications,
- Database background in MSSQL.
- Worked in scripting languages like javascript & typescript.
- Remote side scripting in visual basic, Server Side scripting like asp & node js.
- Creating Web API's, WCF Services and consuming Web Services.
- Trained in SOA architecture involves handling XML & JSON data.
- Worked in e-commerce application(PHP), using Content Management System 'Wordpress' for College project.
- Dealt with creating Batch files & scripts and also with Putty for SFTP operations.
- Hands-on experience in Angular6 & worked in Angular Web application POC's.
- Worked in Reinsurance Business Domain.

TOOLS:

- IDE: Visual Studio Code & Visual Studio 2015
- Source Control System :TortoiseSVN, GitHub.
- Technologies:ASP .Net, WinForms, WCF, ADO.Net
- Web Servers:Microsoft IIS
- Database IDE: Microsoft SQL Server Management Studio (SSMS)

WORK EXPERIENCE:

Currently working with **LTI InfoTech, Chennai** as Software Engineer since November 2016.

ACADEMIC QUALIFICATION:

- Graduated in 2016 Bachelor of Technology in Information Technology.
- Higher Secondary (12th Board) in 2012 with 92.25%.
- Secondary (10th Board) in 2010 with 94.4%.

Project Details:

Client: The Travelers Companies

Description: We used to provide support for a survey web application, which will be used to collect feedback from users and used to generate a report in a format. Users are given access to choose the format to download and to display it in the UI.

Technologies: .Net based web applications.

Project Details:

Client: Marsh and McLennan Group of Companies (MMC)

Description: We dealt with a web application which was used by Reinsurance brokers, especially as a repository to add/modify/send files related with claims & invoice. Our application had an integrated service to convert the documents into .tiff(PEERNET) and commit into File Repository(IDM FILENET). Thereafter the documents can be retrieved/fetched to send/modify documents.

Technologies: .Net based web applications and windows forms applications.

Roles and Responsibilities:

- Requirement gathering and understanding
- Application enhancements
- Solving User tickets(L3 Technical Support)
- Monitoring
- Analysis on performance issues and connectivity issues.
- Active member in Deployment, Automation & Release.

Core Competencies

- Troubleshooting.
- Good team player.
- Flexible to shifts.

I hereby conclude that all the information furnished above is true to the best of my knowledge and belief.
